## DETAILED ACTION

### *Specification*

*Brackets opened and closed the title should be removed.*

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Iwata et al. (US Pub. 2003/0155866), hereinafter Iwata.

Iwata discloses a circuit (Figs. 1-3) as well as method for automatically adjusting an operation voltage of an active matrix organic light emitting diode (6) (AMOLED), comprising:

A display panel of an AMOLED having a terminal (D) of an organic light emitting diode (OLED) and an auto-adjusting circuit (5, 7) connected to the terminal of the OLED, wherein a current pass through the terminal of the OLED is detected (24) by the auto-adjusting circuit (5, 7) and a voltage adjusted by the auto-adjusting circuit (5, 7) according to the current detected ([0051]-[0057]).

### *Allowable Subject Matter*

Art Unit: 2821

3. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: the prior fails to establish a resistor for generating a sensing voltage, a subtracting circuit connected to the resistor for computing a voltage difference between the sensing voltage and a voltage applied to the terminal of the OLED, a comparing circuit for comparing the voltage difference with a reference voltage in order to provide a control signal, and a digital processor connected to the comparing circuit for automatically adjusting the voltage applied to the terminal of the OLED according to the control signal as required in claim 2.

***Citation of pertinent prior art***

5. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Li (US Pat. 6,778,151) discloses driving circuit of display capable of preventing charge accumulation.

Chang (US Pub. 2004/0051690) discloses driving circuit and method of driving display device.

Oomura (US Pub. 2003/0020413) discloses active matrix display.

Hack et al. (US Pub. 2002/0030647) discloses uniform active matrix OLED displays.
